

For Immediate Release

Mr. Einstein, light does not propagate at a constant velocity,
rather,
light propagates at a constant acceleration;
and,
do you know how to (did you, indeed,) **derive $E=MC^2$?**

The above captioned is just one set of the many frontiers pushing findings discoursed in *Physics' One Slippy and Two Goofies on the Very Fundamental (that have prevailed until NOW)*: a no nonsense, easy to read book, packed with discerned, relevant, and non-regurgitated facts and analyses, along with supporting, originally derived equations all congruent to the well proven physics, to substantiate the claims.

Gravity a la Newton (why apples/raindrops keep falling on his/your head) is not any fundamental natural force at all, and, is now being **quantumized**. The said Gravity's acceleration (9.8 meters per second per second) as measured (valid only on Planet Earth's surface) is just the reciprocal of the Atmospheric Pressure!?

Elementary particles are all bi-polar. Ergo, Electrons are not (just) negatively charged; while, Protons are not (just) positively charged. Each of them all embeds both the negative as well as the positive charge. It is highly conceivable that a Proton is nothing but a clustering of Electrons. And, there is no need for "Neutron" to balance the book; it is just two Bitrons (a.k.a. Electrons) circulating around one Biclusteron, (a clustering of Bitrons) known as Proton hitherto.

Physics' One Slippy and Two Goofies on the Very Fundamental (that have prevailed until NOW)
